2));
    }));
  }
  render();
})();
```

Notes & Next steps

- This is a self-contained starter front-end. Replace the simulated `showRedirect` and localStorage use with real server endpoints and a payment provider (Stripe/PayPal) for production.
- For hosting: place all files in a single directory and upload to any static host (Netlify, Vercel, GitHub Pages) or a standard web server.

If you want, I can now: - Convert this into a zip file for download, - Add real Stripe checkout integration (requires keys), - Create an admin HTML page that uses `dashboard.css` and `dashboard.js` (already prepared) — or - Customize the look (colors, fonts, imagery).

Tell me which one and I'll update the files.
